

We don't juggle too many balls

at once. We rather celebrate

a new kind of mobility.

EASY SOFTWARE

THINKING AHEAD FOR YOU

A man with a beard and glasses, wearing a white shirt and a headset, is standing on a balcony overlooking a body of water at sunset. He is holding a smartphone in his right hand and has a bag slung over his shoulder. The background shows a sunset over a body of water with buildings in the distance.

Enterprise Mobility:

Greater freedom - to achieve more.

The requirement: mobility.

Organizations across industries are under pressure: they have to offer their customers maximum experience while working profitably and efficiently. That's why your employees in Sales, Accounting, Marketing, Service, and Logistics need modern IT equipment. People need IT technology that extends beyond the office desk, giving them the freedom to work when and where they want.

Mobile applications are the solution. Business apps that grant access to any business process and any piece of information, provided the user has the corresponding permission. Simple and easy to use – regardless of how versatile the background IT architecture is or how complex the process might be. Regardless of location and time, across platforms and devices.

The challenge: greater freedom.

Eliminating spatial boundaries is what this is all about. It's about mobilizing people, tasks, and organizations to enable employees to be involved in business processes while they're traveling. Enterprise mobility is in the best interest of organizations because customers no longer accept long processing times.

Today, data can be transferred in real time, from anywhere – the apps on our smartphones are proof of this every day. Being capable of saving documents and customer-related information in a central location and distributing it gives you a competitive edge. What better way to achieve this than to work in the business sector using the smart tools that have long been established in the world of consumers? Apps have the potential to ensure greater mobility and simplicity in the business sector – even more so by using EASY SPIRIT.

The objective: to achieve more.

EASY SPIRIT ensures enterprise mobility is a snap. Using a wide variety of business apps for any conceivable process, organizations ensure greater efficiency because mobile solutions also integrate colleagues while they are on business travels. Delays in internal decision-making tasks, or triggering a workflow too late owing to out-of-office times of individual employees are a thing of the past. Process delivery works better and more trouble-free at the intersections between departments.

As a result, all this means increasing efficiency. Your organization's productivity is improving, and collaboration within your organization is optimized. Cost-savings, more satisfied employees and, last but not least, satisfied customers are also great benefits.

EASY SPIRIT:

Your Business while you travel.

THE SOLUTION: EASY SPIRIT

Implementing enterprise mobility doesn't need to be difficult. Not even when your corporate structures are complex. Because with EASY SPIRIT, EASY provides a standardized development platform for mobile apps, supporting value core processes.

EASY SPIRIT

- integrates business processes across platforms and devices into a single business app.
- the app can integrate with ERP systems or other systems, for example.
- ensures 24-hour-access to company resources, regardless of location and device.
- significantly shortens development and integration time for business apps.

For this, the SPIRIT2Design development platform provides, for example, connectors to a wide range of systems. This allows for especially fast, bidirectional data transfer. You can synchronize data between your headquarters, site, and mobile employees in real time – and your data is always available and up to date, anywhere.

Even already existing business apps can be mobilized using SPIRIT2Design – because the development platform provides the solutions and interfaces you need. And if you need a customized app for your system and process environment, the SPIRIT platform allows you to develop an executable and fully embeddable app within the shortest time – including interfaces, hosting and support.

EASY SPIRIT2Design:

A single kit –

unlimited capabilities

DETAILS

Imagine your ERP did not have, for example, any interfaces for mobile devices and mobile operating systems. Or it used a Webservice as an interface. In that case, you had to take the role of translator, trying to teach ERP, Webservice and app a common language. Integrating logics only worked at app level. Each mobile device required its own logic. The same was true of your data model. You also had to adjust it to fit any device. Now you can forget about all that. Stop worrying about how to efficiently manage all this repetitive work, because you no longer have to. All you need is a single solution: EASY SPIRIT2Design.

EASY SPIRIT2Design allows you to configure, operate, and maintain all of these functions in a central platform – and integrate them quickly and efficiently for any mobile device using SDKs. You only need to define the logic once. That's it. Your data is automatically app-capable and communication between the app and ERP works trouble-free. And if you do make changes to data deployment for the app, you only need to do so on your central EASY SPIRIT platform. You don't need to access your app or your device to do so. So the EASY SPIRIT Suite not only enables you to travel faster with your mobile device – operations and redesign are also much more agile and can be implemented four times faster. The mobile world is always on the move. EASY lets you keep up with it.

EASY SPIRIT2Design module overview

Best Practice EASY SPIRIT:

Goodbye to complexity!

USE CASES – BEST PRACTICE EASY SPIRIT

Good maintenance pays off!

Maintenance of technical facilities is rarely efficient. Communicating with HQ via telephone, missing parts, paper-based orders and logs – all this thwarts both back-office staff and sales representatives unless you do what a German heating manufacturer recently did: they selected a service and maintenance app based on EASY SPIRIT. It distributes maintenance jobs; it is used as a communication hub, logging all processes and synchronizing the data with the corporate systems. The result: easing the back-office load and increasing service efficiency and quality. What more would you want?

Giving paper a break!

EASY vacation management puts you in vacation mood. With an app based on the EASY SPIRIT Suite, EASY employees can submit their vacation requests anywhere, anytime. Supervisors synchronize the data in the app with the team's

vacation schedule at a glance, and can approve the request from a mobile device. This helps with optimal resource planning. Integrated push notifications give both employees and supervisors an ideal overview at all times. This means less work for everyone, with significantly increased transparency.

A class of its own!

Thanks to EASY SPIRIT and a digital class register, there's a new spirit taking hold in the classrooms of language schools with global operations: teachers had never before been able to document their lessons and attendance faster and more transparently than through their own EASY SPIRIT app. In this way, EASY SPIRIT creates more freedom for interaction with students and maximum knowledge transfer.

A top-down view of a wooden desk. In the center, a hand is drawing a wireframe for a mobile application on a piece of paper. The wireframe shows a smartphone screen with a navigation bar at the top, a list of items, and a bottom navigation bar. To the left of the drawing is a silver pen. To the right is a red mug filled with coffee. In the top left corner, there is a small potted succulent. A white smartphone is lying on the desk above the drawing. The text 'App development' is overlaid in a blue box on the top part of the drawing.

App development

on the highest level.

Four times faster!

AT A GLANCE

Advantages

- You'll improve your added value and efficiency – using faster processes and increased transparency.
- You'll benefit from improved cost efficiency, security, and quality.
- You'll allow your employees to work more independently.
- Your customers and workers will be more satisfied.
- You'll improve your image by using modern technologies.
- Your apps will be quickly executable, communicating with your central applications in real time, thanks to software development kits and standard connectors.
- You'll improve your data quality, data management, and data availability.
- You'll benefit from low investment costs – thanks to a unique development platform and less expensive ongoing developments.
- You'll use the safest cloud technology, either in your data center or the EASY data center.
